OdishaWeatherman

NWP Guidance for Cyclogenesis over the North Indian Ocean

Based on the 1200 UTC model runs of 22 October 2026

Prepared automatically at 1753 UTC, 22 October 2026

This is an automatic summary of what the computer models show. It is not an official forecast or warning; for those, follow the India Meteorological Department (mausam.imd.gov.in).

NWP guidance by model

MODEL	Bay of Bengal (BoB)	Arabian Sea (AS)
Global models		
ECMWF HRES 22/06Z run (latest)	LPA over southeast BoB on 22/06. To intensify into D on 22/18 over eastcentral BoB, CS on 26/06 and VSCS on 28/00. To move west-northwestwards and lie over westcentral BoB as VSCS on 28/06. Peak intensity VSCS (132 km/h, 971 hPa) on 28/06. Another D over southwest BoB on 25/12. To move northeastwards and cross Tamil Nadu coast near Vedaranyam on 25/20 as D (42 km/h). Peak intensity D (49 km/h, 1006 hPa) on 25/12.	D over southeast AS on 23/06. To move northwards and lie over southeast AS as LPA on 25/12. Peak intensity D (45 km/h, 1006 hPa) on 23/12.
NCEP-GFS 22/12Z run	D over southeast BoB on 22/12. To intensify into CS on 24/12 and VSCS on 26/12. To move northwestwards and cross Andhra Pradesh coast between Kalingapatnam and Baruva on 28/09 as VSCS (151 km/h). To weaken gradually thereafter. Peak intensity VSCS (165 km/h, 957 hPa) on 27/06.	No significant system is indicated over AS during next 16 days.
DWD ICON 22/12Z run	LPA over eastcentral BoB on 22/18. To intensify into D on 23/06 over eastcentral BoB, CS on 26/00 and VSCS on 27/12. To move west-northwestwards and cross Andhra Pradesh coast near Visakhapatnam on 27/16 as VSCS (145 km/h). To weaken gradually thereafter. Peak intensity VSCS (145 km/h, 966 hPa) on 27/12.	D over eastcentral AS on 28/18. To move north-northwestwards and lie over northeast AS as LPA on 30/00. Peak intensity D (34 km/h, 1007 hPa) on 29/18.
CMC GEM 22/12Z run	D over southeast BoB on 22/12. To intensify into CS on 24/12 and SCS on 25/12. To move north-northwestwards and cross Odisha coast near Gopalpur on 27/14 as SCS (117 km/h). To weaken gradually thereafter. Peak intensity SCS (117 km/h, 974 hPa) on 27/12. Another DD over southwest BoB on 24/18. To move east-northeastwards and lie over southwest BoB as DD on 25/18. Peak intensity DD (54 km/h, 1006 hPa) on 24/18.	No significant system is indicated over AS during next 10 days.
AI models		
EC-AIFS 22/12Z run	No significant system is indicated over BoB during next 1 days.	No significant system is indicated over AS during next 1 days.
NOAA AIGFS 22/12Z run	D over southeast BoB on 22/12. To intensify into CS on 25/00 and VSCS on 26/12. To move northwestwards and cross Andhra Pradesh coast between Kalingapatnam and Baruva on 27/00 as SCS (117 km/h). To weaken gradually thereafter. Peak intensity VSCS (152 km/h, 963 hPa) on 26/18.	No significant system is indicated over AS during next 16 days.
Ensembles (mean of the members)		

MODEL	Bay of Bengal (BoB)	Arabian Sea (AS)
ECMWF ENS 22/00Z run (latest)	100% of 51 members show a system. Mean track: D over southeast BoB on 22/00, to move north-northwestwards towards Andhra Pradesh coast between Narsapur and Kakinada around 28/01. Mean intensity up to SCS around 27/06.	76% of 51 members show a system. Mean track: D over the Lakshadweep area on 22/18, to move eastwards towards Kerala – Karnataka coasts between Kannur and Mangaluru around 25/02. Mean intensity up to DD around 24/12.
AIFS ENS 22/00Z run (latest)	100% of 52 members show a system. Mean track: LPA over southeast BoB on 22/00, to move northwestwards towards Andhra Pradesh coast between Narsapur and Kakinada around 27/16. Mean intensity up to CS around 26/18.	65% of 52 members show a system. Mean track: D over the Lakshadweep area on 23/00, to move northeastwards over the sea. Mean intensity up to D around 23/12.
NCEP GEFS 22/00Z run (latest)	100% of 31 members show a system. Mean track: D over eastcentral BoB on 22/18, to move north-northwestwards towards Andhra Pradesh coast near Kalingapatnam around 28/04. Mean intensity up to SCS around 27/00.	23% of 31 members show a low at some time, but their positions and timings are too scattered for a mean track.

(latest): this model has no run at this cycle (or it is not ready yet); its newest earlier run is used.

Legends

ECMWF: European Centre for Medium-Range Weather Forecasts (IFS HRES); NCEP GFS: National Centers for Environmental Prediction Global Forecast System; DWD ICON: Deutscher Wetterdienst ICON global model; CMC GEM: Canadian Meteorological Centre GDPS; EC-AIFS: ECMWF Artificial Intelligence Forecasting System; NOAA AIGFS: NOAA AI Global Forecast System; ECMWF ENS / AIFS ENS / NCEP GEFS / NOAA AIGEFS: ensembles of the same centres. LPA: Low Pressure Area, WML: Well Marked Low, D: Depression, DD: Deep Depression, CS: Cyclonic Storm, SCS: Severe CS, VSCS: Very Severe CS, ESCS: Extremely Severe CS, SuCS: Super CS. Times are DD/HH in UTC (e.g. 22/12 = 22nd, 1200 UTC).

Summary

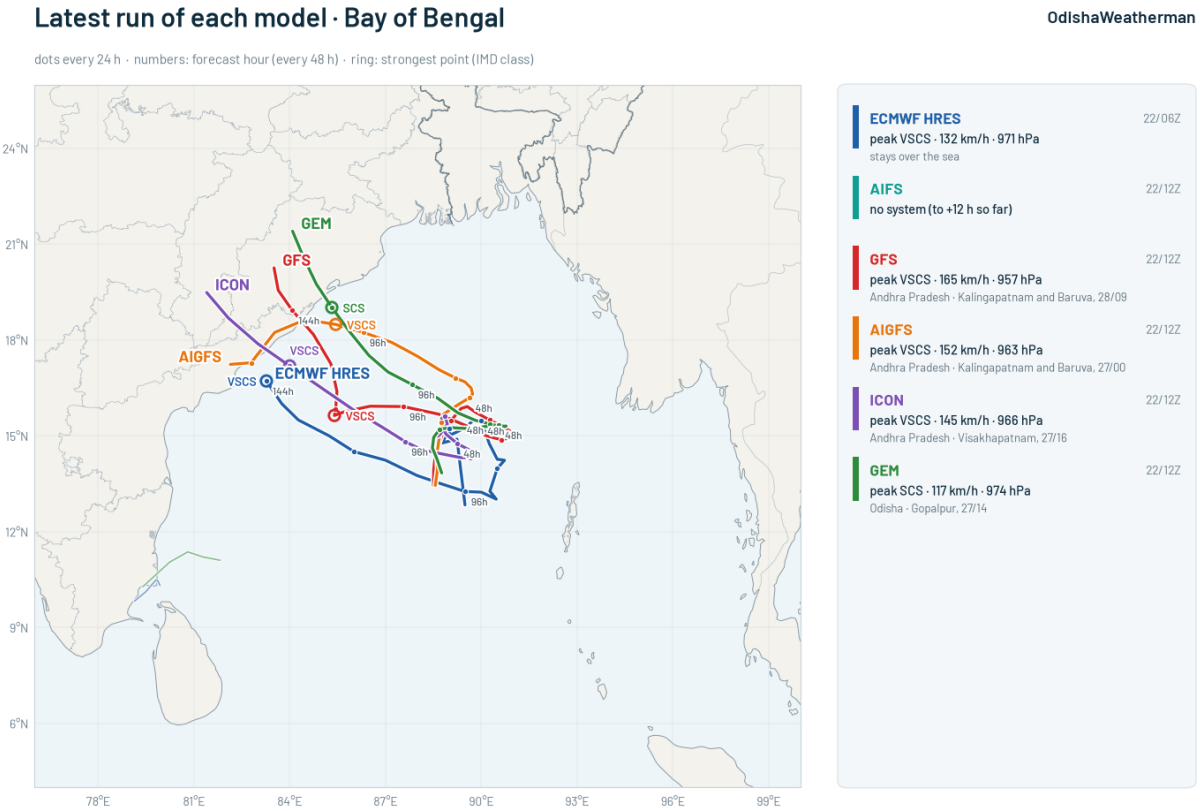

(a) Bay of Bengal:

Most numerical models (ECMWF HRES, NCEP-GFS, DWD ICON, CMC GEM, NOAA AIGFS) are indicating the formation of a low pressure system over southeast BoB around 22 October, while DWD ICON indicates formation over eastcentral BoB. All of them indicate intensification into a depression around 22–23 October, and ECMWF HRES, NCEP-GFS, DWD ICON, CMC GEM, NOAA AIGFS further into a cyclonic storm (ECMWF HRES up to VSCS). Regarding movement, they indicate movement towards the Andhra Pradesh coast (NCEP-GFS, DWD ICON, NOAA AIGFS) and towards the Odisha coast (CMC GEM), while ECMWF HRES keeps it over the sea till the end of the forecast. EC-AIFS does not indicate any significant system. Thus there is considerable uncertainty regarding the formation, intensification and subsequent track of the potential system. Ensemble guidance: ECMWF ENS 100%, AIFS ENS 100%, NCEP GEFS 100% of members show a system.

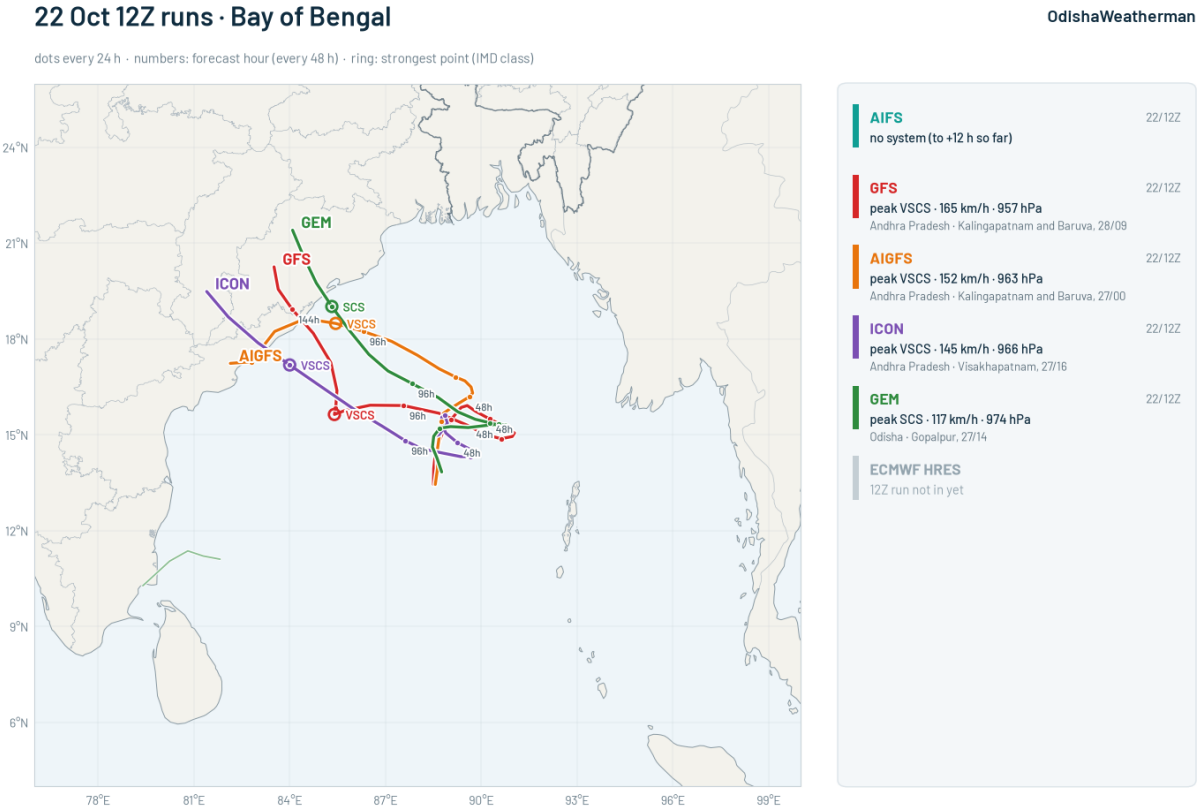

(b) Arabian Sea:

Various numerical models (ECMWF HRES, DWD ICON) are indicating the formation of a low pressure system over southeast AS around 28 October, while DWD ICON indicates formation over eastcentral AS. All of them indicate intensification into a depression around 28 October. No model brings it to the coast within its forecast period. EC-AIFS, NCEP-GFS, NOAA AIGFS, CMC GEM do not indicate any significant system. Thus there is considerable uncertainty regarding the formation, intensification and subsequent track of the potential system. Ensemble guidance: ECMWF ENS 76%, AIFS ENS 65%, NCEP GEFS 23% of members show a system.

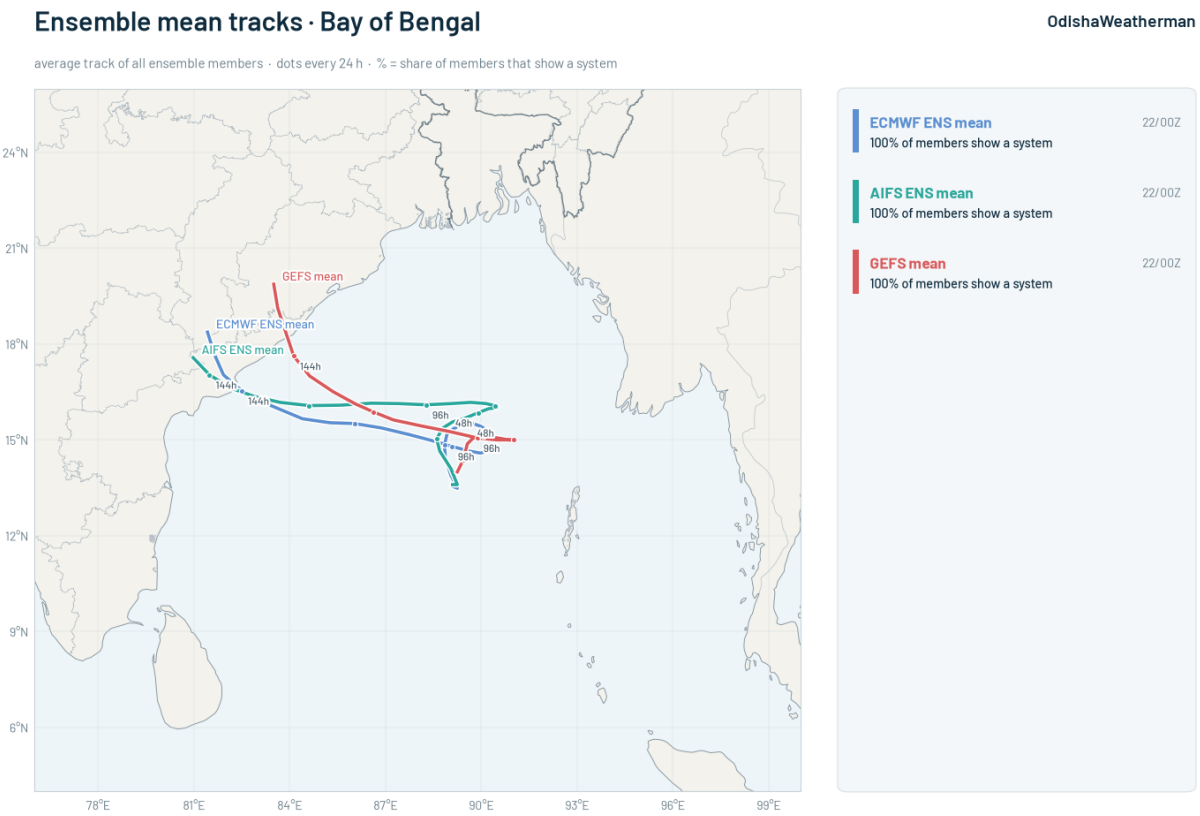

Bay of Bengal: model tracks and intensity

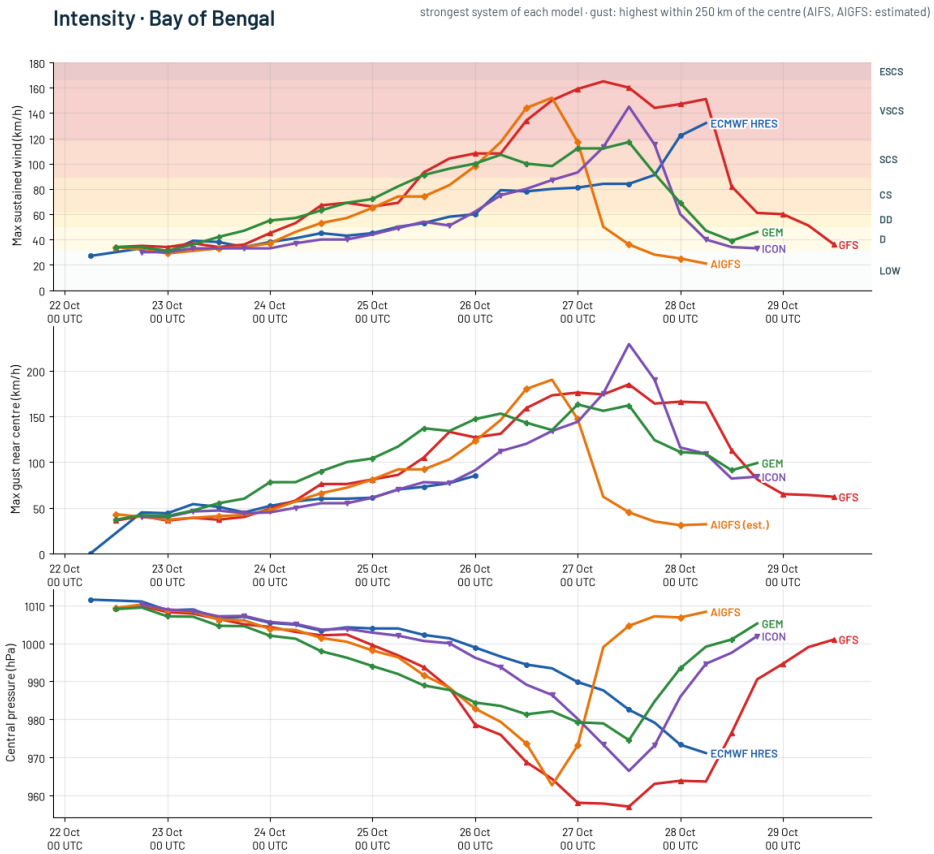

Track forecast of the newest run of each model; dots every 24 h.

Track forecast of the models' runs of the same cycle (00 or 12 UTC) that are in so far.

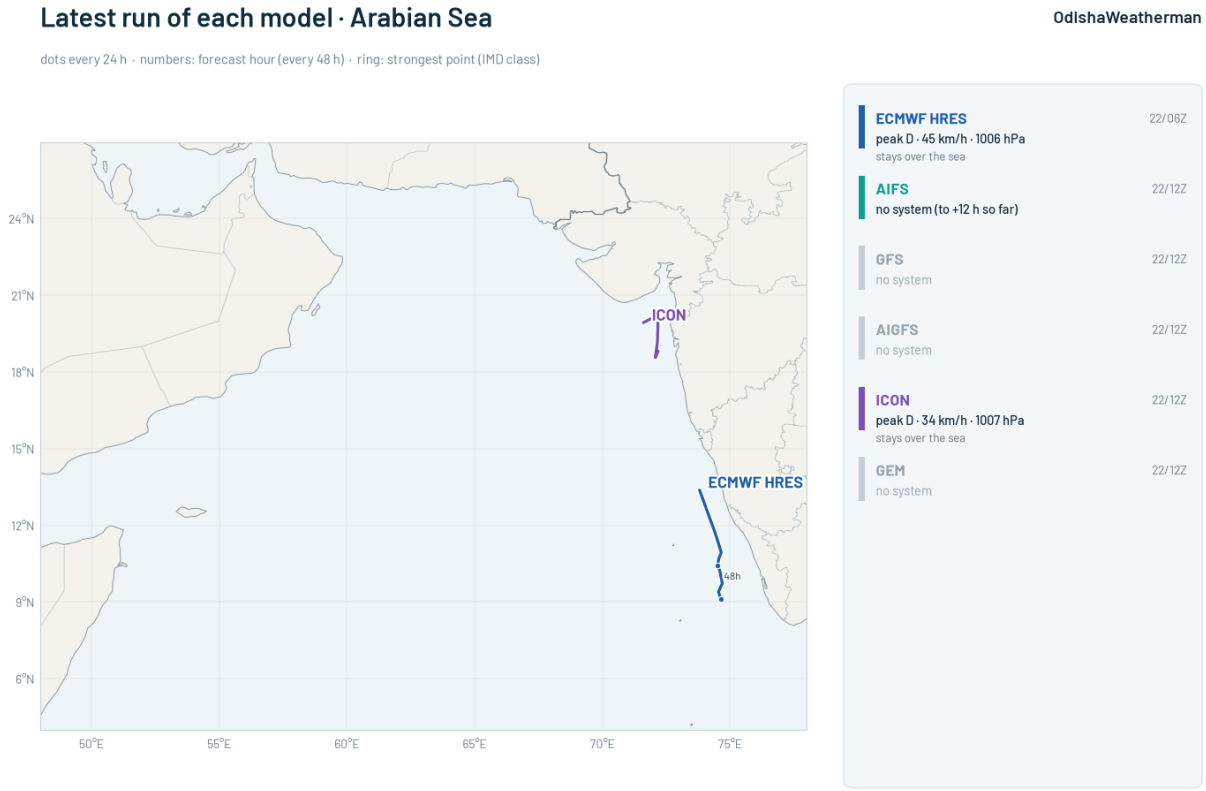

Ensemble mean tracks (ensembles arrive later, so they may be from an earlier cycle than the single models).

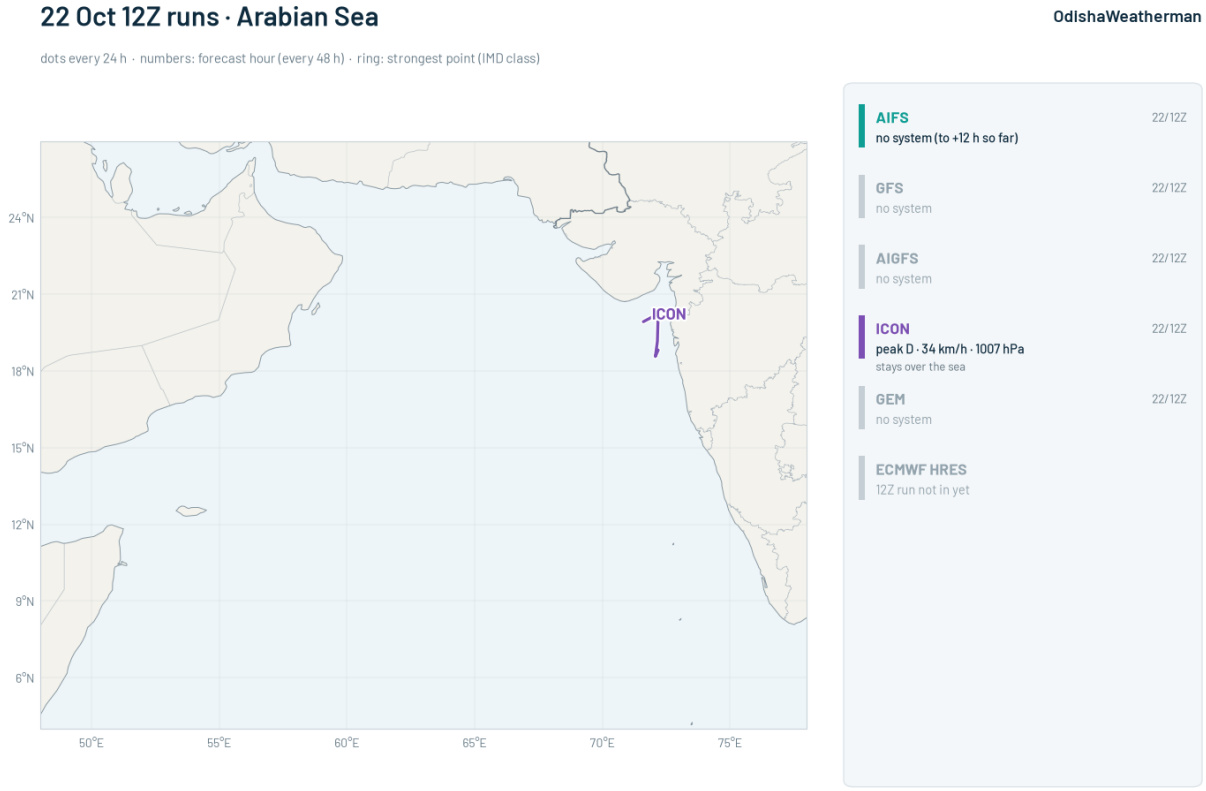

Intensity forecast: maximum sustained wind (top) and central pressure (bottom).

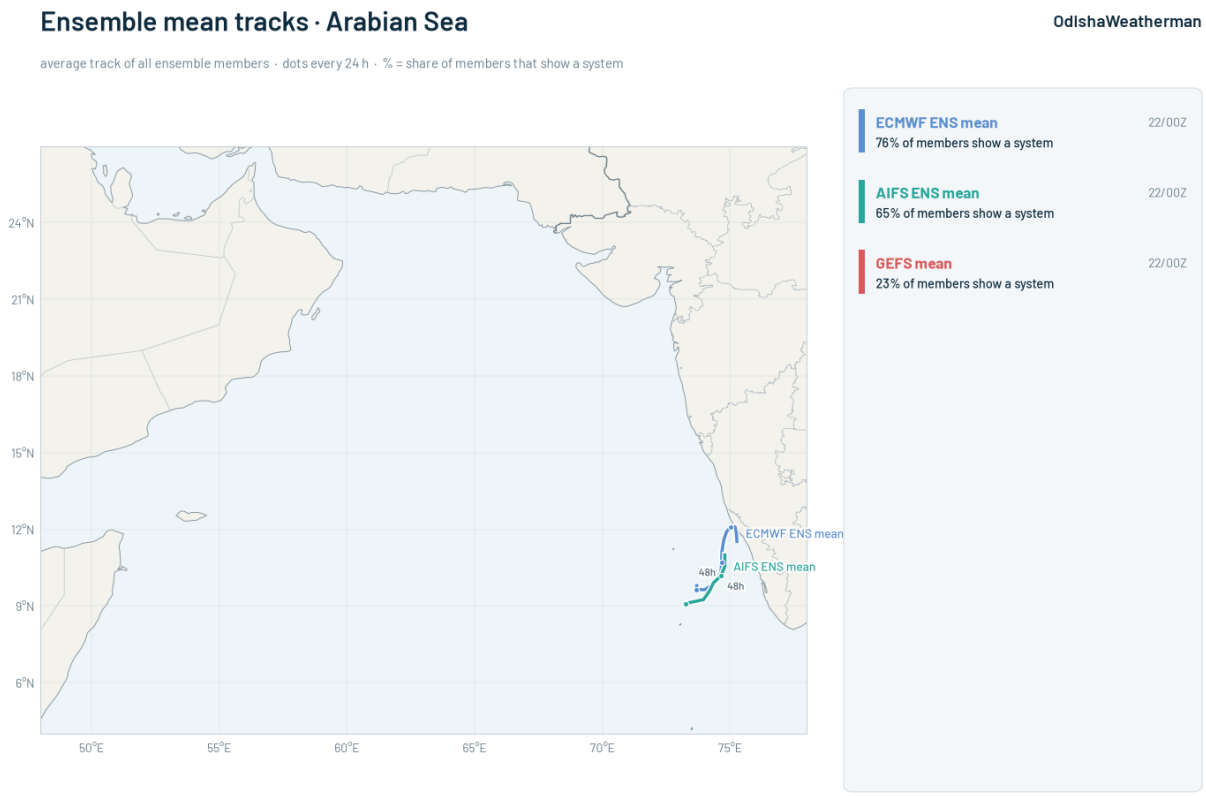

Arabian Sea: model tracks and intensity

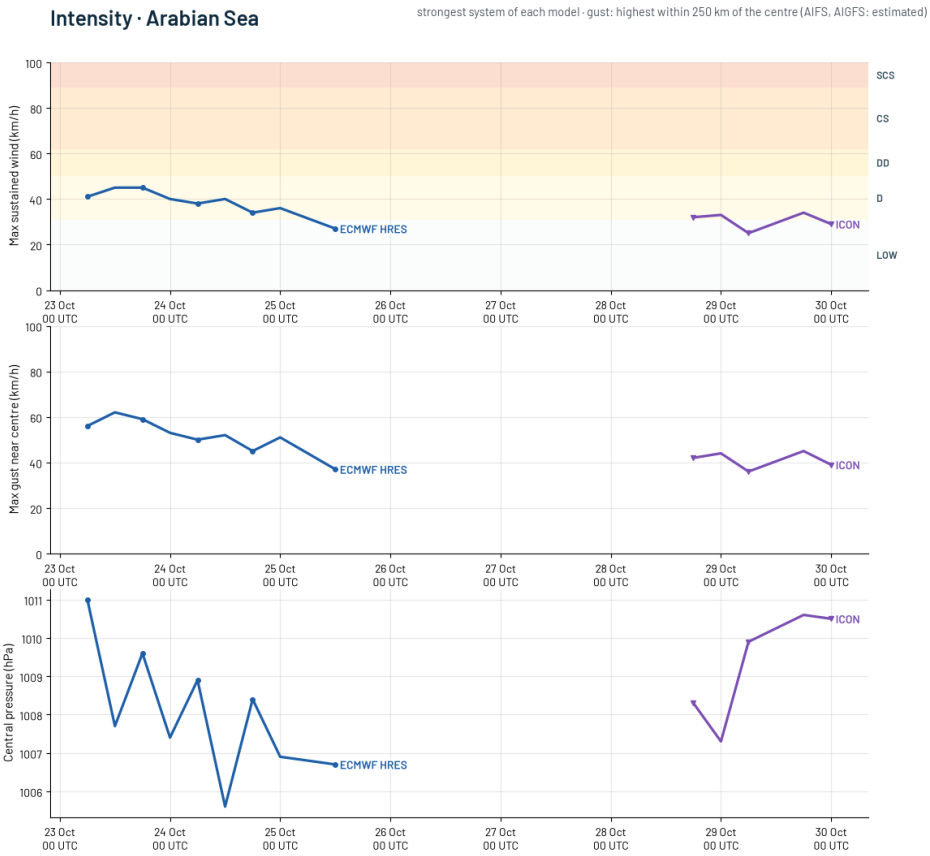

Track forecast of the newest run of each model; dots every 24 h.

Track forecast of the models' runs of the same cycle (00 or 12 UTC) that are in so far.

Ensemble mean tracks (ensembles arrive later, so they may be from an earlier cycle than the single models).

Intensity forecast: maximum sustained wind (top) and central pressure (bottom).
